May 21

Pond Stocking Guide

The number of fish a pond can support depends on factors such as water temperature, available food, flow of water, depth, and surface area. Surface area is the best factor to use as an estimate.

| <u>Surface Area</u> | <u>Number of fish 6" and larger</u> |
|---------------------|-------------------------------------|
| 1/4 ac | 50 |
| 1/2 ac | 100 |
| 1 ac | 150 - 250 |
