May 10**

Pond Stocking Guide

The number of fish a pond can support depends on factors such as water temperature, available food, flow of water, depth, and surface area. Surface area is the best factor to use as an estimate.

<u>Surface Area</u>	<u>Number of fish 6" and larger</u>
1/4 ac	50
1/2 ac	100
1 ac	150 - 250
